**Change Order Chronology**

<b>Change Order #</b>	<b>Date</b>	<b>Area</b>	<b>Description of Change</b>
1	February 4, 2003	Small slope above Hiawatha Seam/ cattle trail	<p>In an effort to obtain additional substitute topsoil, the slope above the Hiawatha Coal Seam outcrop/cattle trail was cut back to two small slopes and one terrace. Slopes were excavated to expose bedrock to blend in with the existing topography. The area was seeded as specified in the Biology Section.</p> <p>Additional area for hydroseed application is approximately 0.08 acres. Soil obtained from the cut was distributed along the Hiawatha Coal Seam outcrop and used to reconfigure the cattle trail intersection with the Phase 1 reclamation area. Slope material consisted of colluvial material ranging from silt/sand to large boulders. Large boulders were segregated for use as riprap. Excess soil (approximately 50 yards<sup>3</sup>) from this area was transferred to cover the Hiawatha Coal Seam outcrop west of the rockfall area. Total soil salvaged from this area was approximately 750 yards<sup>3</sup> (excluding riprap). Review photo #1.</p>
